# TESTIMONIAL: WOBBLER'S REGENERATION

BY MIKE MASTERS SEPTEMBER 7, 2017

*"Our family adopted Titan nearly two years ago from a younger family with small children who were nervous around his very exuberant and playful nature. He adapted quickly to his new family and sibling dogs, and quickly become known to the neighborhood as a bit of a clown who loved to chase toys in the back yard and visit their children when out for a walk.*

*One morning Titan woke up with difficulty controlling his rear legs. Initially, we thought perhaps he had slept in an awkward position and would walk it off. That would not be the case. The next day he was diagnosed with Wobbler Disease and our world ground to a halt. After a tearful evening of thinking of all the things he would never do again, we remembered hearing about GOLDIC and the success Arthrogen was having in regenerating bone and ligament tissues in horses. After a call to Daryl Boyd, the GOLDIC kit was on its way the next day. Fortunately, the first vet neurologist we talked to agreed to administer the injections. We were so confident that Titan's spine would be regenerated, we decid-*

*ed to document the entire process in the form of a YouTube video. Titan began responding to the injections before the series of four were even completed. The morning of his fourth and final injection, I turned around in the living room to find him lying on the couch! No longer the sad look of despair on his face, but rather his unique, goofy grin that we had come to love.*

*Today Titan shows no evidence of ever having had this terrible disease and has returned to doing all the things he loves. To see Titan's story, search YouTube for "The Cure for Wobbler Disease and MORE".*

*Remember to scroll through the "comments" section to see links to additional videos showing him running through the dog park, and jumping effortlessly into our SUV!*

*Thank you, Daryl Boyd, and Arthrogen for giving our active, healthy, 7 year old boy back to us!"*
