## Case Summary Report

---

**Patient Name:** *Royal Journey*  
**Owner Name:** *Willow Brae Farm*  
**Farm:** *Magali Farms*  
**Date:** *February 8, 2016*

---

**Diagnosis:**

- ◆ Right front carpus: Complete bi-articular, sagittal plane fracture of the radial facet of third carpal bone.
- ◆ Right front carpus: Moderate tearing of the medial inter-carpal ligaments.

**Discharge Summary:**

The above listed horse was treated in January 2015 for the above listed abnormalities. A sagittal fracture of the third carpal bone was treated with arthroscopic debridement and stabilization of the main fragment with a single 3.5 mm cortical bone screw placed in lag fashion. At surgery significant tearing of the medial inter-carpal ligaments was also noted. The loose and damaged tissue was also debrided.

The horse was given a guarded prognosis for return to racing based on the intra-operative findings. The horse was subsequently treated with the Goldic product post-operatively and has since raced three times without lameness issues in the right front carpus. The inclusion of the Goldic product in the post-operative care undoubtedly improved this horse's prognosis.
